S rial No. 09/421,434 May 23, 2002 Page 2

Please replace claims 1 and 16 with the following claims:

1. A method for manufacturing and screening a piezoelectric transformer apparatus including an actuator and a generator, the method comprising the steps of:

beginning manufacturing of the piezoelegiric transformer apparatus;

connecting a load impedance to said generator;

applying a stress signal to said actuator to vibrate the piezoelectric transformer apparatus;

identifying whether the transformer apparatus has a mechanical latent defect;

and

completing the manufacture of the piezoelectric transformer apparatus after the step of identifying whether the transformer apparatus has the mechanical latent defect.

M6. The method according to Claim 15, further comprising the step of identifying whether the piezoelectric transformer apparatus has the mechanical latent defect after said steps of connecting a load impedance to said generator and applying a stress signal to said actuator to vibrate the piezoelectric transformer apparatus.
